Fourth Assignment: Software Visualization (WS 02/03)

Exercise 1: (4 points)

In the previous project you had to implement the visualization of an algorithm for scheduling of independent tasks. Now imagine, you had to evaluate the effectivity of your visualization. To this end you would have to design a pre- and a post-test. Suggest at least a pre-test question, a knowledge question, a transfer question and an open question for such a questionnaire.

Please, hand in your assignment at the start of the lecture on December 11th.
